

## **Cleaning Cards from Compc Products**

**To whom it may concern:**

**To ease the maintenance and to effectively clean the validators in the field without access to the inside of the validator, CashCode has tested the MFL-cleaning card and come to the following conclusions:**

- **The card effectively cleans dirt from the optic and inductive sensors.**
- **The card effectively cleans transport rollers.**

**Additionally the input and output sensors should be cleaned with a small swab using ethyl or isopropyl alcohol. The regular cleaning of the internal components, on a regular basis is still recommended in accordance with our guidelines.**
